

Using Information for Strategic Innovation

NRIT's Core Competence

NRIT is a Business Intelligence & Analytics consulting company with expertise in all the areas needed to implement a successful "BI" solution for its clients. NRIT has been building and designing data warehouses and data marts for the Healthcare industry for several years. NRIT has expertise with the industry's leading vendor's products -- such as Cognos, SAS, Business Objects, SPSS, Microstrategy, Informatica and Ascential, which makes them uniquely qualified to bring best of breed solutions to its clients.

Capabilities and Expertise

NRIT not only offer specialized BI solutions for your environment, but we also understand the specific needs of all sizes and types of healthcare operations. Our domain experts have experience solving HIPAA concerns, HL7 interfaces and their impact on clinical process flows, data processing and billing. We understand the changing needs of the overall industry, and the rapid adjustments that need to occur due to changing regulations, equipment, and clinical practices. Our healthcare team has had experience in all healthcare areas, including not-for-profits, overseas operations, specialized clinical systems and the use of business intelligence to support clinical pathways and care plans. Our prior experience has led us into joining of clinical (from treatment machines to Electronic Health Records) financial and billing data to address the needs of all areas of management and clinical personnel in an easy to use and reliable manner.

Over the years NRIT's services have been used by the best and brightest of companies in USA. Our range of offerings includes:

Business Intelligence

- Assessment of your environment for implementing a Business Intelligence solution for your enterprise or department.
- Analysis and design of a BI initiative
- Planning and implementing an ETL strategy for your environment.
- Design and development of Data Warehouses and Data Marts
- Design of analytic models for your organization

Analytics

- Solutions that will provide the ability to slice and dice data by diagnosis, referring physician, and other dimensions to support practice valuation and operations.
- Analytics to support research decisions, based on clinical data.
- Models that include case-rate analysis.
- Models to evaluate adherence to HCFA 'normalized' curves.

Delivery Mechanisms

- **On site** – at customers site
- **Off site** – at our Orange County development center
- **Off shore** – at our India based ISO certified Development center
- Or, a combination of the above.

NRIT, Inc. has become widely recognized as one of the truly focused consulting companies that offer soup-to-nuts services for any Business Intelligence initiative.

We bring our knowledge, expertise and methodologies to enable our clients to gain more knowledge from their data to be more effective and efficient.

Our professionals are experienced in every phase of the system development life cycle: from the preparation of IT strategic plans, to the extraction of data, presentation and analysis. NRIT has a Software Design & Development Center in Iselin, New Jersey, and has an established offshore development capability in India.

Using Information for Strategic Innovation

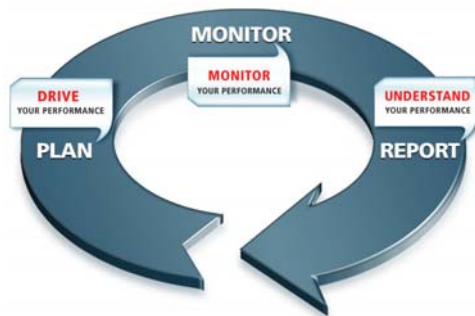

Our healthcare domain experts have tackled the most common and complex issues in healthcare:

- Used and enhanced clinical data in a data mart for honest brokering of data and support of several large-scale research projects with patient base populations over 1000.
- Managed IT/BI infrastructure, including configuration, coordination, maintenance, training, and installation of clinical systems in both a single clinic and multi-clinic atmosphere, in addition to business process reengineering to provide a comprehensive reporting solution for clinicians, operations and executives and to streamline and simplify billing data processes.
- Created dashboards for analysis of data for practice management, physician operations and finance from both general practitioner and specialist data.
- Created solutions for a medical director to support Clinical Best Practices, including dashboards to track adherence to the established pathways.
- Created complete, customized reports from current clinical systems to allow live data evaluation and feedback to clinical users regarding accuracy of CPT and ICD-9 coding, as well as administrative reports to ensure compliance to regulations.
- Created BI strategic plans and solutions that integrate Excel compiled data with billing and financial systems.

Commitment to Quality

NRIT is committed to adhering to well-established international standards (ISO 9001:2000 and SEI/CMM) and processes in all its delivered information system solutions. The processes and methodologies used by NRIT in any one particular client project can be easily extended to other projects / activities for that client. Thus outsourcing to NRIT can be a channel to seamlessly integrate well-tested processes and methodologies into any client's business processes as required.

NRIT's Quality Assurance Group focuses on improving process quality as well as product quality. The stress in NRIT is on error prevention rather than mere error correction when it occurs. On many occasions, we have been able to deliver near zero defect software

. NRIT has built a team of professionals with a cross section of relevant experiences who are qualified to deliver unparalleled end-to-end Business Intelligence solutions.
